

Beat the Heat!

Install Well-Insulated Windows

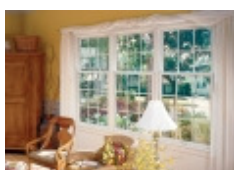

Windows with good insulating values will make your home more comfortable and help reduce your energy bills this summer and throughout the seasons. This is partly because these windows allow less heat or cold to pass through. High performance windows will help keep your house cool to 78 degrees F with air conditioning, when the temperature outside climbs toward 100 degrees F during these hot summer months.

Problems with condensation will also be reduced or eliminated with better insulated windows. Condensation occurs when warm, moist indoor air comes in contact with a cold surface.

Lower Utility Costs

Your home can lose up to 30 percent of its heat or air conditioning due to drafty or poorly insulated windows. You can tell how much heat a window allows through by its U-factor, which measures thermal conductivity. A lower U-factor means a better insulating window.

The term R-value refers to the resistance of the window to heat conduction and is the inverse of a U-factor. Look for windows that have high R-values and low

Save Even More Green!

Time is running out to capitalize on [federal energy tax](#) credits for installing replacement windows on your home. Homeowners can qualify to receive up to \$1,500 in tax credits for utilizing energy-efficient products in their home.

[Click here](#) to see all of the home improvement products that qualify for these tax credits. Hurry! The deadline to qualify is December 31, 2010.

U-factors. There should be labels on your windows from the National Fenestration Rating Council (NFRC) that list U-factors. The U-factor always refers to the whole window.

Energy Efficient Features

- **Double Panes** - Adding a second pane of glass is the first step in improving a window. This traps a layer of still air, which is a good insulator, between the panes.
- **Gas Fill** - The space between the two panes can also be filled with argon or krypton gas, which insulates better than air.
- **Low-Emittance Coatings** - (Low-e) coatings allows heat from the sun in the winter and keeps your home warm inside.

More Insulators

Wood, vinyl and fiberglass are much better insulators than standard aluminum frames (without thermal break). Fiberglass performs slightly better and is the most durable. Vinyl and wood frames generally have similar U-factors.

Our Dial One professionals will inspect and give you a no obligation price quote. [Contact us](#) for a FREE in-home consultation about replacement windows.

[Renewal by Andersen](#) (RBA) windows are built using state-of-the-art technology to help produce the most energy-efficient product possible. Our windows are 14 percent more efficient than the strict [Energy Star](#)® rated criteria. They are also

Refreshing Strawberry Lemonade

Ingredients

- 3 or 4 lemons
- About 3/4 cup sugar
- 1/2 teaspoon salt
- 1 cup strawberries, hulled
- Ice cubes (optional)
- Thin lemon slices (optional)

Preparation

1. Cut the lemons in half and ream juice from them. Pour the juice through a fine-mesh strainer into a measuring cup and discard the seeds and pulp. You should have 1/2 cup. Cover and refrigerate.
2. Place 4 cups water, 3/4 cup sugar, salt, and strawberries in a pan and bring to a boil over medium-high heat. Stir often with a spoon and, using the back of it, crush the berries. Continue to boil, stirring often, until the sugar has dissolved, about 2 minutes. Let cool, cover, and refrigerate until well chilled.
3. Pour the chilled syrup through a fine-mesh strainer into a pitcher; discard the pulp. Add the lemon juice to syrup and stir well. Taste, and adjust to desired sweetness.

Not only are our windows custom built for beauty,
but they are also designed for performance.

Put together beauty, functionality, performance
and professional installation and service, and
you'll appreciate the real value of RBA windows!
